

SEMA in Oil-Country

The Wood Solutions Fair is an event hosted and organized by the Canadian Wood Council. It takes place in five provinces of Canada. In Edmonton, AB, Architects, engineers, designers, builders, technologists, professors and students took the chance to inform themselves about new trends, actual technical solutions and top-of-the-line timber design software.

Since more than 33 years, the SEMA Group is recognized as a pioneering software company in timber and stair construction and more recently also in sheet metal work, metal roof coverings & flashings and facades.

Participating at the 2017 Wood Solutions Fair in Edmonton, Alberta, SEMA demonstrated the convincing individual options and possibilities of the SEMA software to participants and visitors.

Sharing a booth with ACQBUILT - an innovative customer and probably the most successful pre-fab company in North America - SEMA had the chance to prove its capabilities with demonstrations, videos and examples during the exhibit, many interested visitors took the opportunity to learn more and experience the advantages of the SEMA software in pre-designing an pre-fabrication. Intensive estimating and work-preparation, CAD-CAM and computer aided manufacturing processes are the meat and potatoes of a successful prefabrication. ACQBUILT is making perfect use of SEMA's long-term experience in these fields and they were very pleased to give interesting in-sights to curious visitors.

Additional to that, SEMA's representatives were able to directly answer the many questions of the individual visitors and pointed out the multitude of possibilities and advantages the usage of a sophisticated timber construction software has over the usual stick framing process.

Next to builders and timber framers, members of research and development companies and universities were the main visitors at the SEMA booth. The support of trend-setting BIM as a holistic planning process in combination with the long-term experience of SEMA is definitely an indicator for a successful future of SEMA in North America.

SEMA provides software solutions and additional services in the fields of timber and stairs construction, as well as for the sheet metal work. As the world-leader in these sectors, the SEMA program is available in 11 languages and has been used successfully by more than 8,900 customers in 54 languages for over 33 years. Each year, an average of 15 % of the company's turnover is re-invested into the further development of the software solutions so that SEMA customers can always benefit from new and innovative solutions.
